1 Skin Cancer Self-Examination

How to check your spots:

Checking your skin means taking note of all the spots on your body, from moles to freckles to age spots. Remember, some moles are black, red, or even blue. If you see any kind of change on one of your spots, you should have a dermatologist check it out.

1 Examine body front and back in mirror, then right and left sides, arms raised.

2 Bend elbows, look carefully at forearms, back of upper arms, and palms.

3 Look at backs of legs and feet, spaces between toes, and soles.

4 Examine back of neck and scalp with a hand mirror. Part hair and lift.

5 Finally, check back and buttocks with a hand mirror.

2 The ABCDEs of Melanoma

Skin cancer can develop anywhere on the skin. Ask someone for help when checking your skin, especially in hard to see places. If you notice a mole that is different from others, or that changes, itches or bleeds (even if it is small), you should see a dermatologist.

A Asymmetry
One half unlike the other half.

B Border
Irregular, scalloped or poorly defined border.

C Color
Varied from one area to another; shades of tan and brown, black; sometimes white, red or blue.

D Diameter
While melanomas are usually greater than 6mm (the size of a pencil eraser) when diagnosed, they can be smaller.

E Evolving
A mole or skin lesion that looks different from the rest or is changing in size, shape or color.
